1. Overview

1.1 Product Description

Alliance-eMMC combines a feature-wise flash controller and standard NAND flash memory. Its high performance and low power design make the highly-integrated eMMC a fabulous solution for embedded and portable applications.

The Alliance-eMMC leverages industry leading technology and experience in NAND management. In addition, the Alliance-eMMC supports the standard eMMC interface as well as the newly introduced eMMC features such as HS400 mode and FFU. By integrating all the advanced techniques, the Alliance-eMMC is able to further enhance the data transferring efficiency and optimize the overall performance for embedded systems.

Available in various densities, the Alliance-eMMC offers the features, performance, and flexibility exactly for mobile handset, navigation, infotainment, multi-function printer, and next-generation consumer applications. With Industrial temperature support and high data reliability, offering easy and rapid design integration, the Alliance-eMMC also ideally fits the requirements of point-of-sale terminals, networking and telecommunications equipment, and a variety of leading-edge industrial applications.

1.2 Key Features

- Industrial Standard Interface
 - JEDEC eMMC Standard Version 5.1 Compliant
- eMMC 5.1 Enhanced Features
 - 11-signal interface (including CMD, CLK, DAT[7:0], and RST_n)
 - Programmable bus width: 1-bit, 4-bit, and 8-bit
 - Supports HS400 high speed interface timing mode up to 400MB/s data rate
 - Up to 200MHz clock frequency
 - Supports eMMC Field firmware update (FFU)
 - Supports eMMC production state awareness (PSA)
 - Supports eMMC device health report
 - High-speed, Dual Data Rate Boot support
 - Supports Boot and Alternative Boot Mode
 - Replay Protected Memory Block (RPMB)
 - Trim, Sanitize, Discard, Secure Erase, Secure Trim
 - Enhanced Partition Attributes
 - High Priority Interrupt (HPI)
 - Background Operations
 - Enhanced Reliable Write
 - Supports Command Queuing
 - Supports Enhanced Strobe in HS400 Mode
 - Supports eMMC Background Operation Control

- Supports eMMC configuration up to 8 general purpose partitions and 4 RPMB regions
- Supports eMMC CMDQ Enhanced Data Task
- Supports eMMC CMDQ Device Management Operation

- Robust Data Protection and Endurance
 - Configurable ECC engine with zero overhead pipeline greatly reduces data loss rates and increases data endurance
 - Enhanced Write Protection with Permanent, Temporary and Power-On protection options
 - StaticDataRefresh and EarlyRetirement technologies ensure the data reliability
 - PowerShield and DataPhoenix technologies support power-down data protection
 - Global wear leveling maximizes product lifespan with minimal wear leveling and write amplification overhead

- Supply Voltage
 - eMMC Interface Power (VCCQ): 1.70 1.95V
 - eMMC Interface Power (VCCQ): 2.7 3.6V ¹
 - NAND Memory Power (VCC): 2.7 3.6V

- Dynamic power management technology enables multiple power saving modes

- Multiple Densities and Packages
 - Available in 64GB, 128GB, 256GB and 512GB full 3D TLC mode density
 - 153-ball standard BGA packages
 - Green Package and RoHS Compliant

- Operating Temperature
 - Industrial Grade: -40°C ~ +85°C

Note 1: HS200/HS400 mode are not supported when VCCQ is in 2.7-3.6V.

Table 1: Ordering Information

Capacities (GB)	Part Number	eMMC Version	NAND Die	Temperature	Package Size (mm)	Package Type
64	ASFC64G31T5A-51BIN	5.1	64GB x 1	Industrial Grade -40°C ~ 85°C	11.5x13.0x1.2	153ball FBGA
128	ASFC128G32T5A-51BIN	5.1	64GB x 2	Industrial Grade -40°C ~ 85°C	11.5x13.0x1.2	153ball FBGA
256	ASFC256G34T5A-51BIN	5.1	64GB x 4	Industrial Grade -40°C ~ 85°C	11.5x13.0x1.2	153ball FBGA
512	ASFC512G38T5A-51BIN	5.1	64GB x 8	Industrial Grade -40°C ~ 85°C	11.5x13.0x1.4	153ball FBGA

2. Pin Assignments and Signal Descriptions

2.1 Pin Assignments

Figure 2: 153-Ball Pin Assignments (Top View - Balls Down)

2.2 Signal Descriptions

Table 2: Functional Signals

Signal	Type	Description
CLK	Input	Clock. Each cycle of the clock directs a transfer on the command line and on the data line(s). The frequency can vary between the minimum and the maximum clock frequency.
RCLK	Output	eMMC interface data strobe (HS400 mode)
CMD	I/O	Command. This signal is a bidirectional command channel used for command and response transfers. The CMD signal has two bus modes: open-drain mode and push-pull mode. Commands are sent from the MMC host to the device, and responses are sent from the device to the host.
DAT0 – DAT7	I/O	Data I/O. These are bidirectional data signals. The DAT signals operate in push-pull mode. By default, after power-up or assertion of the RST_n signal, only DAT0 is used for data transfer. The MMC controller can configure a wider data bus for data transfer using either DAT[3:0] (4-bit mode) or DAT[7:0] (8-bit mode). eMMC includes internal pull-up resistors for data lines DAT[7:1]. Immediately after entering the 4-bit mode, the device disconnects the internal pull-up resistors on the DAT[3:1] lines. Correspondingly, immediately after entering the 8-bit mode, the device disconnects the internal pull-ups on the DAT[7:1] lines.
RST_n	Input	Reset. The RST_n signal is used for host resetting device, moving the device to pre-idle state. By default, the RST_n signal is temporary disabled in device. The host must set bits[1:0] in the extended CSD register [162] to 0x1 to enable this functionality before the host can use it.
VCC	Supply	NAND interface I/O and NAND Flash power supply.
VCCQ	Supply	eMMC controller core and eMMC interface I/O power supply.
VSS	Supply	NAND interface I/O and NAND Flash ground connection.
VSSQ	Supply	eMMC controller core and eMMC interface ground connection.
VDDi	-	Internal voltage node A 1.0uF capacitor is required for VDDi for core power stabilization. Do not tie to supply voltage or ground.
TX	Output	UART Tx output for debug use

Table 3: Miscellaneous Signals

Signal	Type	Description
NC	-	No connect
RFU	-	Reserved for future use. Leave it floating.

2.3 Pin List

Table 4: Pin List of eMMC Packages

Signal	Pin NO. of 153-Ball
CLK	M6
RCLK	H5
CMD	M5
DAT0 – DAT7	A3, A4, A5, B2, B3, B4, B5, B6
RST_n	K5
VCC	E6, F5, J10, K9
VCCQ	C6, M4, N4, P3, P5
VSS	A6, E7, G5, H10, J5, K8
VSSQ	C4, N2, N5, P4, P6
VDDi	C2
TX	P7
NC	A1, A2, A8 - A14, B1, B7 - B14, C1, C3, C5, C7 - C14, D1 - D4, D12 - D14, E1 - E3, E12 - E14, F1 - F3, F12 - F14, G1, G2, G12 - G14, H1 - H3, H12 - H14, J1 - J3, J12 - J14, K1 - K3, K12 - K14, L1 - L3, L12 - L14, M1 - M3, M7 - M14, N1, N3, N6 - N14, P1, P2, P8 - P14
RFU	A7, E5, E8, E9, E10, F10, G3, G10, K6, K7, K10

3. eMMC Registers

This chapter introduces the registers for eMMC and the defaulted register values in the Alliance-eMMC. The following table presents the register list of current specification.

Within the device the following registers are defined: OCR, CID, CSD, EXT_CSD, and RCA. These can be accessed only by corresponding commands (see eMMC specification). The OCR, CID and CSD registers carry the card/content specific information, while the RCA and DSR registers are configuration registers storing actual configuration parameters. The EXT_CSD register carries both, card specific information and actual configuration parameters.

3.1 OCR Register

For eMMC devices, the OCR (operation conditions register) response is fixed. The value could be either 0x00FF8080 (for storage capacity of up to 2GB) or 0x40FF8080 (for storage capacity greater than 2GB) depending on the capacity.

3.2 CID Register

The Card Identification (CID) register is 128 bits wide. It contains the Device identification information used during the Device identification phase (eMMC protocol). For details, refer to section 7.2 of JEDEC Standard JESD84-B51

Table 5: eMMC CID Register

Name	Field	Bit	Slice	Value	Note
Manufacturer ID	MID	8	[127:120]	52h	Alliance MiD
Reserved	-	6	[119:114]	-	
Device/BGA	CBX	2	[113:112]	01h	
OEM/Application ID	OID	8	[111:104]	52h	Alliance MiD
Product name	PNM 64GB 128GB 256GB 512GB	48	[103:56]	AS064G AS128G AS256G AS512G	
Product revision	PRV	8	[55:48]	01h	RevA
Product serial number	PSN	32	[47:16]	1	
Manufacturing date	MDT	8	[15:8]	1	
CRC7 checksum	CRC	7	[7:1]	1	
Not used, always '1'	-	1	[0:0]	1h	

Note¹: Values for PSN, MDT, and CRC are updated based on the production.

3.3 Relative Card Address Register (RCA)

The writable 16-bit relative card address register stores the card address. This address is published by the card during card identification, and is used for host-card communication following the card identification procedure. The default value of the RCA register is 0x0001. The value 0x0000 is reserved for setting all cards in the Stand-by State with CMD7.

3.4 CSD Register

The Device-Specific Data (CSD) register defines the behavior of eMMC devices. The eMMC behavior is related to the controller design. The following table shows a typical CSD definition of the Alliance-eMMC. If users need to add on more features, firmware or hardware modifications may be necessary.

Table 6: eMMC Typical CSD Register

Name	Field	Bit	Type	Slice	Value	Note
CSD structure	CSD_STRUCTURE	2	R	[127:126]	3h	
System specification version	SPEC_VERS	4	R	[125:122]	4h	
Reserved	-	2	R	[121:120]	-	
Data read access-time-1	TAAC	8	R	[119:112]	27h	
Data read access-time-2 in CLK cycles (NSAC*100)	NSAC	8	R	[111:104]	01h	
Max. bus clock frequency	TRAN_SPEED	8	R	[103:96]	32h	
Device command classes	CCC	12	R	[95:84]	0F5h	
Max. read data block length	READ_BL_LEN	4	R	[83:80]	9h	
Partial blocks for read allowed	READ_BL_PARTIAL	1	R	[79:79]	0h	
Write block misalignment	WRITE_BLK_MISALIGN	1	R	[78:78]	0h	
Read block misalignment	READ_BLK_MISALIGN	1	R	[77:77]	0h	
DSR implemented	DSR_IMP	1	R	[76:76]	0h	
Reserved	-	2	R	[75:74]	-	
Device size	C_SIZE	12	R	[73:62]	FFFh	
Max. read current at VDD (min)	VDD_R_CURR_MIN	3	R	[61:59]	7h	
Max. read current at VDD (max)	VDD_R_CURR_MAX	3	R	[58:56]	7h	
Max. write current at VDD (min)	VDD_W_CURR_MIN	3	R	[55:53]	7h	
Max. write current at VDD (max)	VDD_W_CURR_MAX	3	R	[52:50]	7h	
Device size multiplier	C_SIZE_MULT	3	R	[49:47]	7h	
Erase group size	ERASE_GRP_SIZE	5	R	[46:42]	1Fh	
Erase group size multiplier	ERASE_GRP_MULT	5	R	[41:37]	1Fh	
Write protect group size	WP_GRP_SIZE	5	R	[36:32]	See Note	512GB: 1Fh 256GB: 1Fh 128GB: 1Fh 64GB: 0Fh
Write protect group enable	WP_GRP_ENABLE	1	R	[31:31]	1h	
Manufacturer default ECC	DEFAULT_ECC	2	R	[30:29]	0h	
Write speed factor	R2W_FACTOR	3	R	[28:26]	2h	
Max. write data block length	WRITE_BL_LEN	4	R	[25:22]	9h	
Partial blocks for write allowed	WRITE_BL_PARTIAL	1	R	[21:21]	0h	
Reserved	-	4	-	[20:17]	-	
Content protection application	CONTENT_PROT_APP	1	R	[16:16]	0h	
File format group	FILE_FORMAT_GRP	1	R/W	[15:15]	0h	
Copy flag (OTP)	COPY	1	R/W	[14:14]	1h	
Permanent write protection	PERM_WRITE_PROTECT	1	R/W	[13:13]	0h	

Name	Field	Bit	Type	Slice	Value	Note
Temporary write protection	TMP_WRITE_PROTECT	1	R/W/E	[12:12]	0h	
File format	FILE_FORMAT	2	R/W	[11:10]	0h	
ECC code	ECC	2	R/W/E	[9:8]	0h	
CRC	CRC	7	R/W/E	[7:1]	-	
Not used, always '1'	-	1	-	[0:0]	1h	

Notes:

1. The definitions of cell type are shown as follows:

R: Read only.

W: One time programmable and not readable.

R/W: One time programmable and readable.

W/E: Multiple writable with value kept after power failure, H/W reset assertion and any CMD0 reset and not readable.

R/W/E: Multiple writable with value kept after power failure, H/W reset assertion and any CMD0 reset and readable.

R/W/C_P: Writable after value cleared by power failure and H/W reset assertion (the value not cleared by CMD0 reset) and readable.

R/W/E_P: Multiple writable with value reset after power failure, H/W reset assertion and any CMD0 reset and readable.

W/E_P: Multiple writable with value reset after power failure, H/W reset assertion and any CMD0 reset and not readable.

2. Reserved bits should be read as "0".

3. The column marked with "-" is undefined.

3.5 Extended CSD Register (EXT_CSD)

The Extended CSD register defines the additional behavior of eMMC devices due to limited CSD information. The following table shows a typical extended CSD definition of the Alliance-eMMC. If users need to add on more features, firmware or hardware modifications may be necessary. The register is 512 bytes long. The most significant 320 bytes are the Properties segment, which defines the Device capabilities and cannot be modified by the host. The lower 192 bytes are the Modes segment, which defines the configuration the Device is working in.

Table 7: eMMC Typical EXT_CSD Register

Name	Field	Byte	Type	Slice	Value	Note

Notes:

- The definitions of cell type are shown as follows:

R: Read only.

W: One time programmable and not readable.

R/W: One time programmable and readable.

W/E: Multiple writable with value kept after power failure, H/W reset assertion and any CMD0 reset and not readable.

R/W/E: Multiple writable with value kept after power failure, H/W reset assertion and any CMD0 reset and readable.

R/W/C_P: Writable after value cleared by power failure and H/W reset assertion (the value not cleared by CMD0 reset) and readable.

R/W/E_P: Multiple writable with value reset after power failure, H/W reset assertion and any CMD0 reset and readable.

W/E_P: Multiple writable with value reset after power failure, H/W reset assertion and any CMD0 reset and not readable.

- Reserved bits should be read as "0".

- The column marked with "-" is undefined.

4. DC Electrical Characteristics

Table 8: Operating Conditions

Parameter	Symbol	Min	Max	Unit
Supply Voltage (NAND)	VCC	2.7	3.6	V
Supply Voltage (I/O)	VCCQ	1.7	1.95	V
		2.7	3.6	V
Supply Power-up for 3.3V	tPRUH		35	ms
Supply Power-up for 1.8V	tPRUL		25	ms
Operating Temperature (Industrial Grade)	T _{OPR}	-40	+85	°C

Table 9: Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit
Voltage Input	V _{IN}	-0.3	4.0	V
VCC Supply	VCC	-0.3	4.0	V
VCCQ Supply	VCCQ	-0.3	4.0	V
Storage Temperature (Industrial Grade)	T _{STG}	-40	+85	°C

In the Alliance-eMMC, VCC is used for the NAND flash device; and VCCQ is for the controller and the eMMC interface voltage. A C_{Reg} capacitor must be connected to the VDDi terminal to stabilize regulator output on the system.

Figure 3: Internal Power Diagram (Example)

The following package outline applies to the Alliance-eMMC in 153-ball BGA package and 64GB/128GB/256GB capacity.

Figure 4: 153-Ball BGA Package Outline (11.5mmx13mmx1.2mm)

Symbol	MIN	NOM	MAX	Symbol	MIN	NOM	MAX	Notes: 1. Controlling dimension: Millimeter. 2. Primary datum C and seating plane are defined by the spherical crowns of the solder balls. 3. Dimension b is measured at the maximum solder ball diameter, parallel to primary datum C. 4. Special characteristics C class: ccc, ddd. 5. The pattern of Pin 1 fiducial is for reference only. 6. This package is 153 balls + 31 test pins.

The following package outline applies to the Alliance-eMMC in 153-ball BGA package and 512GB capacity.

Figure 5: 153-Ball BGA Package Outline (11.5mmx13mmx1.4mm)

- Notes:**
- Controlling dimension: Millimeter.
 - Primary datum C and seating plane are defined by the spherical crowns of the solder balls.
 - Dimension b is measured at the maximum solder ball diameter, parallel to primary datum C.
 - Special characteristics C class: ccc, ddd.
 - The pattern of Pin 1 fiducial is for reference only.
 - This package is 153 balls + 31 test pins.
 - Ball placement use 0.30 mm solder Ball.
BGA pad solder mask opening = 0.275 mm
